                                                                                                                                                                                                                                                                                                                                                                                                 pred. No. is the number of results predicted by chance to have a
score greatest than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                 Score

                                                                                                                                                                                                                                                                                                                                                                                                                                  are useful for transforming an actinomyces with a vector. They are also useful for creating vectors for site-specific integrated into boat chromosomes. The integrating vectors are used to express actinomycete genes, annipulate secondary searboils pathways and create new metabole products such as it hybrid entiblotics. The present sequence is pMLP1 attP products such as it hybrid entiblotics. The present sequence is pMLP1 attP.

disorders.

recombinant byte sector comprising byte encoding cobin. The correctionant byte sector comprising byte encoding cobin. The corrections controlled the compression of charge for the sector of pure coopers as most pepthatric disorders, for phreshold physicological, functional, or other investigational analysis of physicological, functional, or other investigational analysis of physicological, functional, or other investigational analysis of physicological, functional, or other controlled the controll The present sequence is a DNA related to human gb 'okba B receptor.
gb2 (HgD2) shares sequence homology with rat caba is receptor gbb,
parathyroid call calcium-ensing receptor and metaborropic glutamatreceptors. It can be produced in host calls by transforming them wi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for detecting a bladder concer-
associated transcript in a coll from a patient. The method comprises
contacting a biological sample from the patient with a polymicactide
that edictively byperdides to a equanos that is 80 a polymicactide
that delectively byperdides to a equanos that is 80 a polymicactide
table of sequences (see ACC50931 to ACC5169) ACC50931 to ACC5169

The invention relates to a movel polymuthestick encoding a gamestine triphosphase binding protein complet receptor (GEV). A polymuthestick entrolled to properties on the protein triphosphase binding protein complete receptor (GEV). The polymuthestick end polympitch as manusant governing the protein triphosphase binding protein completed receptor. The line polymuthestick ender GEVP of the polymuthestick and the great of the polymuthestick and the great of the polymuthestick enders great of the
                                                                                                                                                          Claim 1; SEQ ID NO 1463; 28pp; English
                                                                                                                                                                                          New polymicleotide, useful for preparing a composition for treating a 
patient in meed of increased or suppressed activity or expression of t 
guanosine triphosphate-binding protein coupled receptor.
                                                                                                                                                                                                                                                                                  P-PSDB; ADC87011.

Gaps between the contigs are appresented as trues of N. The order of the bices is behaved to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                quence update by submitter
